

CHISOM DARLYNTON STEVE-OKO

Full-Stack Developer | Cloud Computing

chisomdarlynton@gmail.com | github.com/Darchis01 | linkedin.com/in/chisom-darlynton-1268a4249 | Port Harcourt, Nigeria | chisom-portfolio.vercel.app

SUMMARY

Computer Science graduate of Gregory University Uturu with hands-on full-stack development experience (Python, JavaScript, Django, Flask, React, Node.js) and a self-directed focus on cloud computing, including a Microsoft Azure training program. Built AERO, a predictive network failover system for hybrid cloud environments combining Software-Defined Networking with a machine learning classifier. Additional hands-on background in computer networking (cabling, routers, hardware) and data analysis with Tableau. Actively building and shipping independent projects to GitHub.

TECHNICAL SKILLS

Languages: Python, JavaScript

Frameworks & Libraries: Django, Flask, React, Node.js

Databases & Cloud: PostgreSQL, MySQL, Supabase, Microsoft Azure, Cloud Computing Fundamentals

Networking & Systems: Computer Hardware, Network Cabling, Routers, VM-based Simulation (VirtualBox, Linux), SDN (Mininet/Ryu)

Tools & Platforms: Git/GitHub, VS Code, Vercel, Render, Tableau

Design: Figma, Adobe Illustrator, Adobe Photoshop, Canva, UI/UX Design

EXPERIENCE

Full-Stack Developer — Internship

Jul 2025 – Dec 2025

New Horizon Solutions, Port Harcourt, Nigeria

- Completed full-stack software development training (Python, JavaScript, CSS, Django, API integrations) and delivered features across the stack — from UI implementation to backend logic — as part of an agency team building production web applications for clients.
- Completed a cloud computing training program on Microsoft Azure, covering deployment workflows, infrastructure practices, and cloud-native concepts.
- Completed a UI/UX design side course (Figma, Adobe Illustrator, Photoshop) and applied these skills to real client project work.

Networking & Data Analysis — Internship

Aug 2024 – Dec 2024

Gregory University Uturu (GUU), Abia State, Nigeria

- Worked hands-on with computer hardware components, and built network cables (including twisted-pair) and configured routers to establish working network connections.
- Cleaned and analyzed large datasets — including population statistics — using Tableau's charts and graphing tools, producing subject-matter-based insights and recommendations.

PROJECTS

AERO — Autonomous Edge-Resilience Orchestrator

Final-Year Capstone

- Designed a predictive network failover system for hybrid cloud environments that anticipates link failures and reroutes traffic in real time.
- Combined a Random Forest classifier with Software-Defined Networking (Mininet/Ryu) for failure prediction, built on Flask with a live monitoring dashboard (vis.js, Chart.js).

Stack: Flask · Mininet/Ryu SDN · Random Forest · vis.js · Chart.js | Code: github.com/Darchis01

Additional independent full-stack projects (APIs, frontend apps, and more) are available at github.com/Darchis01.

EDUCATION

B.Sc. Computer Science

2022 – 2026

Gregory University Uturu (GUU), Abia State, Nigeria

CERTIFICATIONS

- Cisco Networking Academy — Get Connected (2021)
- Jobberman / Mastercard Foundation — Building Careers for Workplace Success Training (2026)
