

CHISOM DARLYNTON STEVE-OKO

Full-Stack Developer | Cloud Computing

chisomdarlynton@gmail.com | github.com/Darchis01 | linkedin.com/in/chisom-darlynton-1268a4249 | Port Harcourt, Nigeria

SUMMARY

Computer Science graduate of Gregory University Uturu, with a self-directed focus on cloud computing and hands-on full-stack experience across Python, JavaScript, Django, Flask, React, and Node.js. Built AERO, a predictive network failover system for hybrid cloud environments combining Software-Defined Networking with a machine learning classifier. Internship experience delivering production features across the stack, with working exposure to cloud deployment workflows. Actively building and shipping independent projects to GitHub.

TECHNICAL SKILLS

Languages: Python, JavaScript
Frameworks & Libraries: Django, Flask, React, Node.js
Cloud & Systems: Cloud computing fundamentals, VM-based network simulation (VirtualBox, Linux), Software-Defined Networking (Mininet/Ryu)
Tools & Platforms: Git/GitHub, VS Code, Vercel, Render, Tableau, Canva
Design: UI/UX Design, Graphics Design

EXPERIENCE

Full-Stack Developer — Internship Jul 2025 – Dec 2025
New Horizon Solutions, Port Harcourt, Nigeria

- Delivered features across the full stack — from UI implementation to backend logic — as part of an agency development team building production web applications.
- Developed a strong grounding in cloud computing over months of hands-on training, covering deployment workflows, infrastructure practices, and cloud-native concepts.
- Sharpened existing graphics design skills through real client and project work.

Data Science & Computer Hardware Technology — Internship Aug 2024 – Dec 2024
Gregory University Uturu (GUU), Abia State, Nigeria

- Analyzed datasets and produced reports to support data-driven decisions.
- Built practical grounding in computer hardware fundamentals and systems troubleshooting.

PROJECTS

AERO — Autonomous Edge-Resilience Orchestrator Final-Year Capstone

- Designed a predictive network failover system for hybrid cloud environments that anticipates link failures and reroutes traffic in real time.
- Combined a Random Forest classifier with Software-Defined Networking (Mininet/Ryu) for failure prediction, built on Flask with a live monitoring dashboard (vis.js, Chart.js).

Stack: Flask · Mininet/Ryu SDN · Random Forest · vis.js · Chart.js | Code: github.com/Darchis01

EDUCATION

B.Sc. Computer Science 2022 – 2026
Gregory University Uturu (GUU), Abia State, Nigeria

CERTIFICATIONS

- Cisco Networking Academy — Get Connected (2021)
- Jobberman / Mastercard Foundation — Building Careers for Workplace Success Training (2026)
